

AWS Database Categories - Study Notes

A concise study guide for AWS database services.

Relational Databases (SQL)

Amazon RDS, Amazon Aurora. Used for structured data, ACID transactions, banking, ERP, e-commerce.

Key-Value Databases

Amazon DynamoDB. Fast lookups, user profiles, shopping carts, session management.

Document Databases

Amazon DocumentDB. JSON-like documents, CMS, product catalogs, mobile apps.

In-Memory Databases

Amazon ElastiCache, Amazon MemoryDB for Redis. Caching, leaderboards, real-time analytics.

Graph Databases

Amazon Neptune. Social networks, fraud detection, recommendation engines.

Time-Series Databases

Amazon Timestream. IoT data, monitoring, DevOps metrics.

Ledger Databases

Amazon QLDB. Immutable transaction records, auditing, compliance.

Wide Column Databases

Amazon Keyspaces (Apache Cassandra). Large-scale IoT and event processing.

Search & Analytics

Amazon OpenSearch Service. Log analytics, full-text search, monitoring.

Quick Exam Summary

Category	AWS Service
Relational	RDS, Aurora
Key-Value	DynamoDB
Document	DocumentDB
In-Memory	ElastiCache, MemoryDB
